

ChromaDB Production Operating Handbook

1. Storage Architecture

ChromaDB persists vector embeddings and document metadata to SQLite and ClickHouse or DuckDB format lo

2. Memory Sizing

For optimal HNSW graph caching, allocate at least 2 GB of RAM per 500K vectors. Page 1 details memory requ

3. Evaluation Metrics

Evaluating RAG systems requires measuring both Retrieval Quality (Recall@K, MRR, nDCG@K) and Generation

4. Latency Benchmarks

Retrieval p50 should be under 25ms, while end-to-end generation latency is dominated by LLM response time.
